

This is the first in a series of meetings in the Special Interest Group championed by Bell Labs Ireland, part of Alcatel Lucent Ireland Limited.

### **Focus area:**

In the end-to-end communications solutions, one of the major contributors to energy consumption is the wireless access network. However, current wireless access technologies are not designed with energy-efficiency as one of the core requirements. This SIG will examine how to reduce *dramatically* the power consumption of wireless access networks, considering all levels from the network architecture to enabling component technologies.

This series of meetings will prove popular and examines the relevant issues concerning the wireless industry today and in the future. As always there will be ample time to debate, discuss and network throughout this half-day event, but booking is essential.

## Agenda

12:00pm	Buffet Lunch and networking
12:45pm	Introduction by Sam Samuel - Executive Director of Bell Labs, SIG Sponsor
1:00pm	Suresh Goyal, Bell Labs New Jersey, USA
1:40pm	Mike Keaveney, Analog Devices
2:30pm	Coffee Break
3:00pm	Holger Claussen, Bell Labs Ireland
3:40pm	Industry Speaker, TBC
4:20pm	Wrap -up discussions

**Places are limited.**

**Please RSVP by: 4th of May to [admin@wirelesslab.ie](mailto:admin@wirelesslab.ie).**
